kurzweil 3000 updates:
october 2019

V16.16 (Windows) and V16.0.16 (Macintosh)

1.
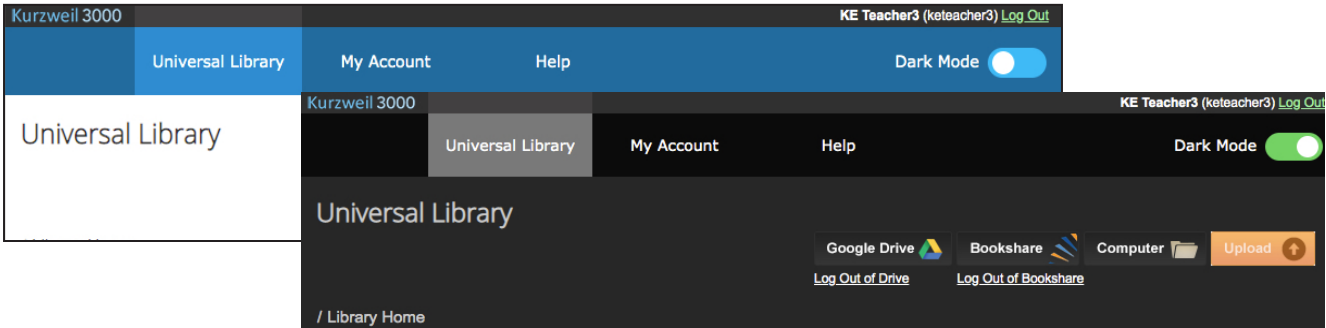

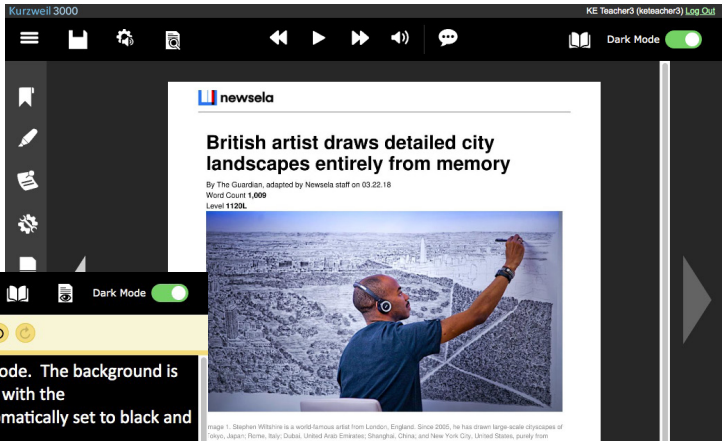

**Dark Mode in Kurzweil 3000 for Web Browsers (www.Kurzweil3000.com)**
You will find the **Dark Mode toggle** in the far right of the top menu bar in all views in www.Kurzweil3000.com. This is a user preference that is saved with your login.
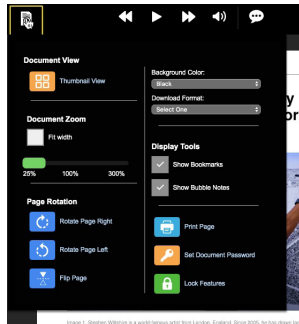

In an image file, the user interface will change, but the image you are reading will not.

In a text file, the background will change to black and the text to white.
Menus will also change to Dark Mode.

2. _____

Feature Locks redesigned in Kurzweil 3000 for Web Browsers (www.Kurzweil3000.com)

Feature Locks have been reorganized and are now called Team Feature Locks.
Go to **My Account > Users**

Click the **Team Feature Locks button**
Feature locks are organized by category
Check or uncheck the boxes to turn on or off specific features for each member of your team.

3. _____

Word Prediction User Interface updated in Kurzweil 3000 for Windows (Web License Subscription Only).
Same Word Prediction button, new look and feel!

Click the **Word Prediction button** and start typing.
The word list will not appear until you start typing, then it will drop down below your cursor.
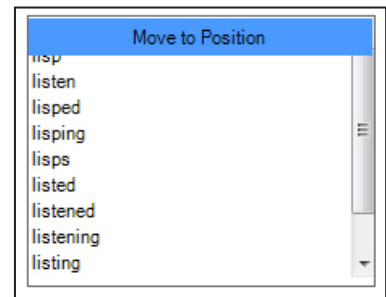

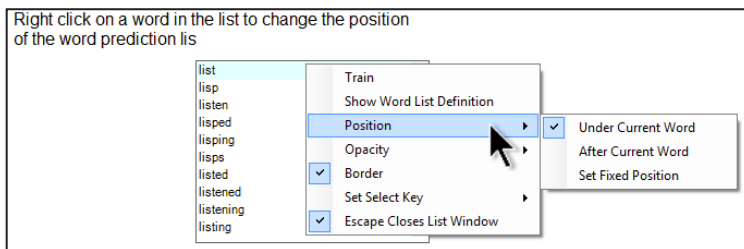

Click on a word in the list to hear it read aloud.
Homonyms (yellow) or confusable (green) words are highlighted in the list and are read with a definition and example of a use of the word.

Right click on a word in the list to customize Word Prediction.
Hint: When setting the Position to Fixed, move the Word Prediction window to the location you want and double-click the blue title bar.

The option to **Train on the Current Document** is now found in **Tools > Options > Word Prediction**
